Zinnia

3601 Bee Cave Rd. \* Austin, TX 78746 \* (512) 328-6655

Some folks find it helpful to apply a liquid deer-deterrent product on all their new plantings, even deer-resistant plants, to help eradicate the smells associated with being in a nursery with abundant water and fertilizers. One application at the time of planting will usually erase remaining nursery scent. There are several liquid products available on the market. Ask a Sales Person for products that we carry and recommend.

Also available at Barton Springs Nursery is a light-weight protective fencing material used to wrap around plants or drape over plantings. It is 7 feet tall and 100 feet long, made of black plastic mesh and can easily be cut with house-hold scissors. We carry coated poles in lengths between 2 feet and 8 feet tall to support the fencing.

Gardening with a heavy deer population is challenging. We hope we can help you have as beautiful a garden as possible by offering a large selection of plant material and products to help you garden with deer.
